Education

Punjabi University **Aug. 2023 – May 2027**
Bachelor of Technology in Computer Science and Engineering *Patiala, Punjab*

Work Experience

Punjab AI Excellence **May 2025 – August 2025**
AI/ML Intern *Ferozepur, Punjab*

- Developed a deep learning–based Plant Disease Detection System using Python, OpenCV, TensorFlow/PyTorch, Pandas, and NumPy for image-based disease classification and early crop disease diagnosis.
- Performed image preprocessing, data augmentation, feature extraction, and model training to improve classification performance.
- Evaluated model performance using Accuracy, Precision, Recall, F1-Score, and Confusion Matrix, and analyzed results to optimize model effectiveness.
- Documented the complete project lifecycle, including methodology, model architecture, experimental results, and conclusions in a comprehensive Project Report
- Open-sourced the project on GitHub for reproducibility and collaboration.

Projects

Plant Disease Detection using Deep Learning | *Python — Tensorflow — OpenCV* **June 2025**

- Engineered an AI-powered solution to identify plant diseases from leaf images using convolution Neural Networks.
- Built a complete image processing pipeline involving preprocessing, augmentation, and feature extraction.
- Optimized the model through iterative training and hyperparameter tuning to improve prediction reliability.
- Designed a solution to support early disease identification in agriculture. [Link]

Crowd Detection Model | *Python — OpenCV — YOLO — Computer Vision* **April 2026**

- Designed an intelligent computer vision system capable of detecting and counting people in real time.
- Leveraged the YOLOv8 object detection framework to deliver fast and accurate crowd analysis.
- Applied object detection algorithms to improve detection accuracy.
- Demonstrated the system for public safety and surveillance applications. [Link]

Loan Repayment Prediction using Machine Learning | *Python — Flask — HTML — CSS* **November 2025**

- Developed a machine learning web application to predict whether a borrower is likely to repay a loan based on financial and credit related features.
- Built and trained classification models using Scikit-learn with data pre-processing, feature encoding, and model evaluation.
- Designed a responsive flask-based web interface for real time prediction using user inputs.
- Saved and deployed the trained model using Joblib(.pkl) for fast and efficient inference.
- Evaluated the model using Accuracy, Precision, Recall, F1-Score, and confusion Matrix. [Link]

Power BI Sales Analytics Dashboard| *Power BI — DAX — Power Query — Data Visualization* **June 2026**

- Participated in the Micorsoft Data Days Power BI Dashboard challenge.
- Designed an interactive Power BI dashboard to analyze and visualize key business insights.
- Performed data cleaning and transformation using Power Query.
- Created DAX measures, KPIs, charts, slicers, and interactive visualizations. [Link]

Technical Skills

Programming Languages: Python, SQL, C++, Javascript
Web Technologies:HTML, CSS, Bootstrap
Tools: VS Code, Google Cloud Platform, Git, Github
AI/ML: Tensorflow, Keras, Pandas, Numpy
Data Analytics:Power BI, DAX, Power Query, Excel

Achievements

- Participated in Microsoft Fabric Data Days Power BI Dashboard Challenge.
- Built 5+ AI/ML projects.

Certificates

- Microsoft Certified: SQL AI: Developer Associate [Link]
- SimpliLearn : Introduction to AI [Link]
